

Mouldings

MOULDINGS

Chemcrest offers hundreds of moulding profiles for either interior or exterior use. The intricate detail of the pattern and the crisp clean lines are what sets Chemcrest mouldings apart from the rest. Chemcrest produces the highest density products in the industry.

Chemcrest mouldings are available in ANY of our materials including High Density Polyurethane, Flex Urethane, F.R.P., G.R.G., and G.F.R.C. Some profiles are also available in our pre-coated EPS material.

In order to match patterns, some mouldings may require end trimming up to 6". Please factor in extra material for your project and consult our installation instructions for more details.

Most mouldings are a standard 12' length to minimize joints, waste and installation time. To install, use a pre-approved polyurethane based adhesive together with mechanical fasteners. Chemcrest offers factory moulded inside and outside corners for a number of profiles.

For an additional charge, Chemcrest H.D.P. can achieve a Class 1A fire rating. Our woodgrain profiles, when stained, replicate the beauty of natural wood without the normal rotting and cracking associated with wood. Chemcrest polyurethane mouldings are lightweight and far easier to install than traditional plaster and cast products of yesterday. A factory applied primer is standard on all products, however on site finishing is required.

Mouldings

See INSTALLATION INSTRUCTIONS - Moulding Installation on page 135 for complete installation instructions.

Dentil Mouldings:

The dentil is the traditional adornment to interior and exterior mouldings. The clean lines and deep cuts of a dentil moulding provide an interesting play of light and shadow. The dentil is included in delicate crown mouldings as often as it is featured in massive fascia mouldings for the exterior of a building. Chemcrest offers a large selection of dentil mouldings in a great variety of dimensions. In addition to the dentil mouldings themselves, Chemcrest also offers separate dentil blocks, some of which match the moulding blocks. Chemcrest also offers a pitched dentil moulding where the dentil block itself is set at a specific pitch so as to sit parallel to the ground upon gable installation.
